

## A major boost to your bottom line!

The ultimate energy efficient compressors, options and upgrades – delivering tangible return on investment!

Industry spends more money on power for compressed air systems than on any other part of the manufacturing and process applications.

Like the cars we drive today, which have become much more energy efficient in the past five years, so too have the compressors and compressed air solutions from CompAir. If your compressor is over five years old, you might be wasting thousands of Euros a year.

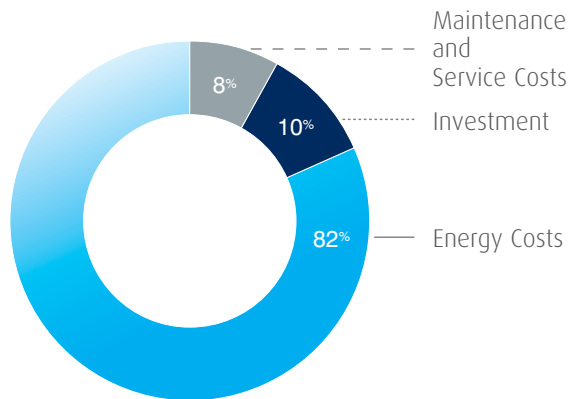

Energy costs account for approximately **82%** of the total cost over the life of the compressor – making energy efficiency solutions the number one priority.

### So, what can you do to save 35% of the energy used for your compressed air system?

CompAir offer a variety of compressed air solutions, to perfectly match your individual requirements.

With the L-Series from CompAir you are already benefitting from modern design concepts with a real focus on reliability and efficiency.

### Lifecycle costs of a compressor

### The new CompAir Assure Warranty

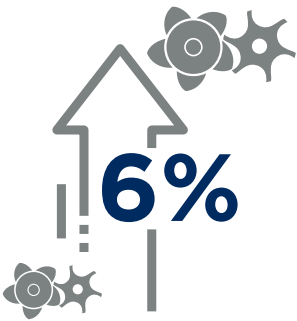

up to 44,000 hours/6 years on the package and **10 years on the airend.**

“ Did you know that 10% of all electricity used in industry is accounted for by compressed air systems

## Options to maximise your energy savings:

### 1. E-Models with Larger Airend

The larger airend offers 6% higher efficiency compared to standard airend sizes

### 3. Compressors with Integrated Heat Recovery

Up to 94% of the waste heat can be recovered for hot water use, industrial processes or heating.

### 2. Regulated Speed Models

Compressors with regulated speed drives match the varying compressed air demand in your application. Potential energy savings of 35% can be delivered.

### 4. Configure your Compressor with IE4 Motor

IE4 is the highest efficiency motor standard.

## Available Upgrades

If for you it's not the right time for investment in a new compressor, there are still tangible options to save energy costs.

Get your compressed air network checked out for leakages with an Air Audit

Get heat recovery retrofitted

Get iConn installed – Industry 4.0 Smart Flow Management
